Send an email to our <a href="#">customer service department</a>.</p>

	<p>Custom made products can take 1-3 weeks from the date of arrival of the impressions at our office for completion of production. Rush service is available at an additional charge.</p>
<p>BE-1C Stereo Ear Plugs</p> <p>Change to BE-1C Stereo Earplugs</p>	<p>With Big Ear's BE-1C you have the world of music at your fingertips. Our custom built stereo plugs deliver beautiful sound while protecting you from noise induced hearing loss and wind noise.</p> <p>The constant sound of air moving past a helmet at highway speeds generates a sound level of 95 to 110 decibels (dB). Hearing professionals recommend wearing hearing protection when exposed to sounds above 85 dB. This means that without hearing protection you are harming your ear's ability to function correctly, and possibly doing permanent damage. By using custom-fit stereo plugs you protect your hearing and eliminate the outside wind noise.</p> <p>All of that noise can be both physically and mentally draining. The constant sound of the wind is something that your brain has to use energy to ignore, lessening your concentration, and making you susceptible to deadly situations. By using stereo plugs the sound of the wind is replaced with your favorite music, allowing you to arrive at your destination rested, and in a better mindset.</p> <p>Big Ear's BE-1C is our most popular stereo plug! It is made to reduce the effects of outside noise and designed for use under a helmet. The BE-1C is manufactured with a black outside shell, a clear inner body made from our soft acoustic vinyl material and a single transducer built into the ear piece. Made with a 50" cable, hardwired and double reinforcement toward the bottom of the ear piece and a 3.5mm stereo plug for interface with source.</p> <ul style="list-style-type: none"><li>● Balanced armature drivers with 35Hz to 16 kHz frequency response</li><li>● Acoustic separation - approximately 18 dB</li><li>● Sensitivity ~ 112 dB/mW</li><li>● Standard comes with clear shell and black face plate</li><li>● Additional options include: Yellow, Blue, Pink, Hot Pink, Red, Orange, Purple, Forest Green, and Black. These options also include either a matching colored face plate or a black face plate. (Additional Charge for Colors)</li></ul>

<p>BE-DESC Stereo Plug Savers, Desiccant Pack With Storage Tube</p>	<p>Moisture is the #1 cause for needed repairs in stereo plugs. Moisture that your body produces travels into the stereo plugs during use, travels down the tubes and into the filter which causes the filters to clog resulting in reduced or no sound in one or both sides. Eventually the moisture goes past the filter into the driver causing the driver to fail resulting in costly replacement. Moisture can even get into the cable causing the inside of the cable to rot resulting intermediate or complete loss of sound in one or both sides.</p> <p>Help reduce these problems from happening by using this Stereo Plug saver. Anytime you are not using your stereo plugs, just store them in the plastic tube with the desiccant pack inside, and the desiccant will absorb the moisture.</p> <p>Includes: Plastic Storage Tube and Desiccant Pack</p>
<p>BE-EHPD All Digital Hearing Protection</p>	<p>Our ALL DIGITAL BE-EHPD offers the best in electronic hearing protection, along with the great sound that you have come to expect from Big ear products.</p> <p>Features:</p> <ul style="list-style-type: none"> <li>● 100% Digital</li> <li>● 2 Channel DSP</li> <li>● 12 band adjustable sound control</li> </ul>

	<p>You can also go to a local hearing professional who can make an impression of your ears. Just send the impression to our office for processing. If you need help finding a local hearing professional, Customer Service can help you with that too. Send an email to our customer service department.</p>
<p>BE-FM1 Firefighter Communications Control Device</p>	<p>The Firefighter Communication Control Device is a custom molded single transducer earplug on one side (left) and a filtered Noise Breaker earplug on the other (right). The set is designed to fit each individual firefighter. This set of safety gear provides a noise reduction of 19 dB, which provides hearing protection while also allowing the firefighter to retain full situational awareness and significantly elevated accuracy in radio communications.</p> <p>The tactical earplug securely attaches to most VHF radios in use and puts the communications directly into the ear of the user. Firefighters hear their intercom clearly and precisely, responding more effectively and maintaining a higher level of safety.</p> <p>Made from a proprietary soft fit material, this tactical earplug set can be worn all day if needed. It is designed for other equipment to be worn over the top, and has Kevlar coated wiring for the toughest use.</p> <ul style="list-style-type: none"><li>● Proprietary Soft Material for Enhanced Comfort</li><li>● Kevlar Coated Wires</li><li>● Increase Levels of Hearing Protection</li><li>● 18" Connector Cord</li><li>● Noise Reduction of 19 dB</li><li>● Balanced Armature Drivers with 40hz - 16kHz Frequency Response</li><li>● Sensitivity 114dB @1mW</li></ul> <p>One Year Limited Warranty (90 Day Fit Warranty)</p> <p>Since our products are customized, we will need a full impression of your ears.</p>

BE-MET-Clear Musician Earplug Trainer™

The Musician Earplug Trainer™ (patent pending), or MET-CLEAR is custom hearing protection designed 100% with the musician in mind. Other generic, or even custom products, which state they are for musicians give the musician an occluded or "clogged" feeling when worn. They prohibit the musician from hearing their own instrument, or those of others in the band or orchestra. In most cases this feeling makes the musician stop wearing hearing protection all together, risking permanent noise-induced hearing loss. The Musician Earplug Trainer™ is a specialized patent-pending product, and the only one on the market which allows the musician to hear themselves and others clearly. This "spatial awareness" is not available with any other product, which is why the Musician Earplug Trainer™ is the new industry standard.

- Made from A Proprietary Soft Fit Material
- Two Filter System
- Non-Linear Filter with varied "mini-orifices" to train your hearing
- A 21 decibel attenuated filter plus the ability to use differing decibel filters if needed. The mini-orifice design allows more or less sound to be introduced without changing filters.
- Removable pop-cord

Standard: Clear soft fit material

Colors Available: Beige, Blue, Camo Black, Camo Brown, Camo Green, Neon Green, Hot Pink, Red, Black, Brown, Green, Orange, White, Yellow, Red-White-Blue, Safety Yellow, and Safety Orange

Additional \$10 charge for colors
